

Connected for Optimal Control

Honeywell Action Management

Action Management

High-tech made easy

Honeywell Action Management remotely connects facility managers, supervisors and engineering staff using a mobile application to receive customized real-time facility performance notifications – anytime, anywhere. This ensures that buildings operate at an optimal level.

Honeywell Action Management is part of Honeywell's growing Connected Building Management portfolio, which leverages the connectivity of buildings to improve operations and the experiences they offer for those who visit and work within them. This portfolio draws from the

collective power of Internet of Things (IoT) technologies, cloud applications and the deep domain expertise of Honeywell's service engineers and it's more than 10,000,000 building installations.

Honeywell Action Management

Action Management is a fault detection and management service. It enables early detection of critical failures in buildings and delivers notifications straight to your mobile device where you can track, escalate and manage actions in real time.

It does this by monitoring the building 24/7 through rules based algorithms and publishing valuable/critical

performance alerts including BMS alarms, and allows personnel to take action on those alerts.

This improves uptime, saves time in diagnosing and resolving issues and helps facility managers and building operators use limited resources effectively.

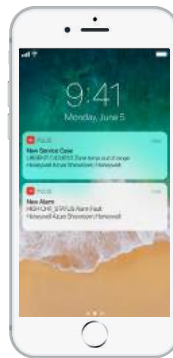

Stay in Control

By driving accountability, enabling collaboration and visualizing historical data, the Action Management facilitates timely and efficient outcomes that positively impact facility productivity. Facility personnel can stay connected to a building's performance by harnessing the power of connectivity to:

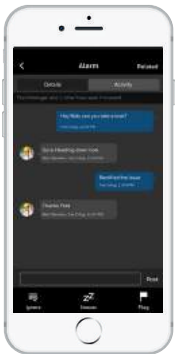

Stay alert and informed

Receive customized alerts and timely notifications from multiple data sources leveraging existing Honeywell software.

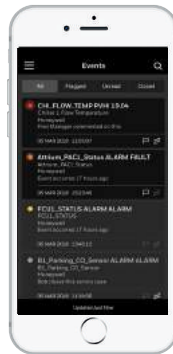

Raise situational awareness

Forward, share and receive critical alarms and events in near real-time, and initiate rapid response for faster decision making.

Harness the power of connected collaboration

Tap the collective brainpower of others within an organization, collaborating with subject matter experts and enlisting the help of others as needed to address and resolve a situation quickly.

Maximize building performance

Proactively seek and analyze trends and conditions to optimize performance.

Action Management versions:

Basic Package Alarm forwarding with basic alarm management features.

Enhanced Package Basic Package plus rules based notifications and enhanced action management features

Custom Package Customizable package for unique needs.

The Honeywell Action Management App is available in the Apple App Store. Runs on iPhone 5S or later with iOS 9.X. Also available for Android in the Google Play Store. Runs on Nexus 5 and Samsung S6 / Note 5 devices with OS version 5.1 & 6.0. Also available to developers for customization.

Partners

Honeywell connected solutions are exclusively provided to you by carefully selected and specially trained PARTNER companies of our three brands Trend, Saia-Burgess Controls and Centraline.

These are established, highly experienced system houses which receive in-depth training and can rely on a comprehensive support infrastructure, both locally and through latest web technology.

The combination of a strong local presence and unrivalled technology from a global player, such as Honeywell, provides the best solution for you:

- One supplier for planning, installation, commissioning and service.
- Ideal, cost-effective solutions for every project, through helpful partners who work flexibly, efficiently and quickly.
- Innovative and forward-thinking product advancement from a global leader in connected building management solutions.
